

# News Release

EMBARGOED UNTIL RELEASE AT 8:30 A.M. EDT, THURSDAY, JULY 30, 2020

BEA 20-37

Technical:	Lisa Mataloni (GDP)	(301) 278-9083	<a href="mailto:gdpniwd@bea.gov">gdpniwd@bea.gov</a>
	Dave Wasshausen (Update)	(301) 278-9715	
	Erich Strassner (Update)	(301) 278-9612	
Media:	Jeannine Aversa	(301) 278-9003	<a href="mailto:Jeannine.Aversa@bea.gov">Jeannine.Aversa@bea.gov</a>

## Gross Domestic Product, Second Quarter 2020 (Advance Estimate) and Annual Update

**Real gross domestic product** (GDP) decreased at an annual rate of 32.9 percent in the second quarter of 2020 (table 1), according to the "advance" estimate released by the Bureau of Economic Analysis. In the first quarter, real GDP decreased 5.0 percent.

The GDP estimate released today is based on source data that are incomplete or subject to further revision by the source agency (see "Source Data for the Advance Estimate" on page 2). The "second" estimate for the second quarter, based on more complete data, will be released on August 27, 2020.

### Coronavirus (COVID-19) Impact on the Second-Quarter 2020 GDP Estimate

The decline in second quarter GDP reflected the response to COVID-19, as "stay-at-home" orders issued in March and April were partially lifted in some areas of the country in May and June, and government pandemic assistance payments were distributed to households and businesses. This led to rapid shifts in activity, as businesses and schools continued remote work and consumers and businesses canceled, restricted, or redirected their spending. The full economic effects of the COVID-19 pandemic cannot be quantified in the GDP estimate for the second quarter of 2020 because the impacts are generally embedded in source data and cannot be separately identified. For more information, see the [Technical Note](#).

The decrease in **real GDP** reflected decreases in personal consumption expenditures (PCE), exports, private inventory investment, nonresidential fixed investment, residential fixed investment, and state and local government spending that were partly offset by an increase in federal government spending. Imports, which are a subtraction in the calculation of GDP, decreased (table 2).

The decrease in PCE reflected decreases in services (led by health care) and goods (led by clothing and footwear). The decrease in exports primarily reflected a decrease in goods (led by capital goods). The decrease in private inventory investment primarily reflected a decrease in retail (led by motor vehicle dealers). The decrease in nonresidential fixed investment primarily reflected a decrease in equipment (led by transportation equipment), while the decrease in residential investment primarily reflected a decrease in new single-family housing.

**Current-dollar GDP** decreased 34.3 percent, or \$2.15 trillion, in the second quarter to a level of \$19.41 trillion. In the first quarter, GDP decreased 3.4 percent, or \$186.3 billion (table 1 and table 3).

The **price index for gross domestic purchases** decreased 1.5 percent in the second quarter, in contrast to an increase of 1.4 percent in the first quarter (table 4). **The PCE price index** decreased 1.9 percent, in contrast to an increase of 1.3 percent. Excluding food and energy prices, the PCE price index decreased 1.1 percent, in contrast to an increase of 1.6 percent.

### Personal Income and Outlays

**Current-dollar personal income** increased \$1.39 trillion in the second quarter, compared with an increase of \$193.4 billion in the first quarter. The increase in personal income was more than accounted for by an increase in personal current transfer receipts (notably, government social benefits) that was partly offset by declines in compensation and proprietors' income (table 8). Additional information on several factors impacting personal income can be found in "[Effects of Selected Federal Pandemic Response Programs on Personal Income](#)."

**Disposable personal income** increased \$1.53 trillion, or 42.1 percent, in the second quarter, compared with an increase of \$157.8 billion, or 3.9 percent, in the first quarter. **Real disposable personal income** increased 44.9 percent, compared with an increase of 2.6 percent.

**Personal outlays** decreased \$1.57 trillion, after decreasing \$232.5 billion. The decrease in outlays was led by a decrease in PCE for services.

**Personal saving** was \$4.69 trillion in the second quarter, compared with \$1.59 trillion in the first quarter. The **personal saving rate**—personal saving as a percentage of disposable personal income—was 25.7 percent in the second quarter, compared with 9.5 percent in the first quarter.

### Source Data for the Advance Estimate

Information on the source data and key assumptions used in the advance estimate is provided in a [Technical Note](#) that is posted with the news release on BEA's Web site. A detailed "[Key Source Data and Assumptions](#)" file is also posted for each release. For information on updates to GDP, see the "Additional Information" section that follows.

## Annual Update of the National Income and Product Accounts

The estimates released today also reflect the results of the Annual Update of the National Income and Product Accounts (NIPAs). The timespan of the update is the first quarter of 2015 through the fourth quarter of 2019 for estimates of real GDP and its major components, and the first quarter of 1999 through the fourth quarter of 2019 for estimates of income and saving. The reference year remains 2012. More information on the 2020 Annual Update is included in the May *Survey of Current Business* article, "[GDP and the Economy](#)."

For the period of expansion from the second quarter of 2009 through the fourth quarter of 2019, real GDP increased at an annual rate of 2.3 percent, the same as previously published.

With today's release, most NIPA tables are available through [BEA's Interactive Data application](#) on the BEA Web site ([www.bea.gov](http://www.bea.gov)). See "[Information on Updates to the National Income and Product Accounts](#)" for the complete table release schedule and a summary of results, which includes a discussion of methodology changes. A table showing the major current-dollar revisions and their sources for each component of GDP, national income, and personal income is also provided. The August 2020 [Survey of Current Business](#) will contain an article describing the update in more detail.

Previously published estimates, which are superseded by today's release, are found in [BEA's archives](#).

### Updates for the First Quarter of 2020

For the first quarter of 2020, **real GDP** is estimated to have decreased 5.0 percent (table 1), the same decrease as previously published. An upward revision to private inventory investment was offset by a downward revision to exports and an upward revision to imports.

**Real GDI** is now estimated to have decreased 2.5 percent in the first quarter (table 1); in the previously published estimates, first-quarter GDI was estimated to have decreased 4.4 percent. The leading contributor to the upward revision was compensation, based primarily on new first-quarter wage and salary estimates from the BLS Quarterly Census of Employment and Wages.

The **price index for gross domestic purchases** is now estimated to have increased 1.4 percent in the first quarter, 0.3 percentage point lower than previously published (table 4). **The PCE price index** increased 1.3 percent, the same increase as previously published. Excluding food and energy prices, the PCE price index increased 1.6 percent, 0.1 percentage point lower than previously published.

	First Quarter 2020	
	<u>Previous Estimate</u>	<u>Revised</u>
	<u>(Percent change from preceding quarter)</u>	
Real GDP	-5.0	-5.0
Current-dollar GDP	-3.4	-3.4
Real GDI	-4.4	-2.5
Average of Real GDP and GDI	-4.7	-3.7
Gross domestic purchases price index	1.7	1.4
PCE price index	1.3	1.3
PCE price index excluding food and energy	1.7	1.6

### Bringing Together National, Industry, and State GDP Statistics

BEA is speeding up the release of its industry and state GDP statistics to [coordinate more closely with the quarterly estimates](#) of national GDP. Starting on September 30, industry GDP statistics will be issued on the same day – and in the same news release – as the third estimate of national GDP. State-by-state GDP statistics will follow in a separate news release within two days. [These three major dimensions of GDP will be synchronized](#) to cover the same quarter, giving users a fuller and more timely view of the U.S. economy.

Next release, August 27, 2020 at 8:30 A.M. EDT  
Gross Domestic Product, Second Quarter 2020 (Second Estimate)  
Corporate Profits, Second Quarter 2020 (Preliminary Estimate)

## Additional Information

### Resources

Additional resources available at [www.bea.gov](http://www.bea.gov):

- Information on COVID-19 and recovery impacts is available on our [web site](#).
- Stay informed about BEA developments by reading the BEA [blog](#), signing up for BEA's [email subscription service](#), or following BEA on Twitter [@BEA\\_News](#).
- Historical time series for these estimates can be accessed in BEA's [interactive data application](#).
- Access BEA data by registering for BEA's data [application programming interface](#) (API).
- For more on BEA's statistics, see our monthly online journal, the [Survey of Current Business](#).
- BEA's [news release schedule](#)
- [NIPA Handbook](#): Concepts and Methods of the U.S. National Income and Product Accounts

### Definitions

**Gross domestic product** (GDP) is the value of the goods and services produced by the nation's economy less the value of the goods and services used up in production. GDP is also equal to the sum of personal consumption expenditures, gross private domestic investment, net exports of goods and services, and government consumption expenditures and gross investment.

**Gross domestic income** (GDI) is the sum of incomes earned and costs incurred in the production of GDP. In national economic accounting, GDP and GDI are conceptually equal. In practice, GDP and GDI differ because they are constructed using largely independent source data.

**Current-dollar estimates** are valued in the prices of the period when the transactions occurred—that is, at "market value." Also referred to as "nominal estimates" or as "current-price estimates."

**Real values** are inflation-adjusted estimates—that is, estimates that exclude the effects of price changes.

The **gross domestic purchases price index** measures the prices of final goods and services purchased by U.S. residents.

The **personal consumption expenditure price index** measures the prices paid for the goods and services purchased by, or on the behalf of, "persons."

**Personal income** is the income received by, or on behalf of, all persons from all sources: from participation as laborers

in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

**Disposable personal income** is the income available to persons for spending or saving. It is equal to personal income less personal current taxes.

**Personal outlays** is the sum of personal consumption expenditures, personal interest payments, and personal current transfer payments.

**Personal saving** is personal income less personal outlays and personal current taxes.

The **personal saving rate** is personal saving as a percentage of disposable personal income.

**Profits from current production**, referred to as corporate profits with inventory valuation adjustment (IVA) and capital consumption adjustment (CCAdj) in the National Income and Product Accounts (NIPAs), is a measure of the net income of corporations before deducting income taxes that is consistent with the value of goods and services measured in GDP. The IVA and CCAdj are adjustments that convert inventory withdrawals and depreciation of fixed assets reported on a tax-return, historical-cost basis to the current-cost economic measures used in the national income and product accounts. Profits for domestic industries reflect profits for all corporations located within the geographic borders of the United States. The rest-of-the-world (ROW) component of profits is measured as the difference between profits received from ROW and profits paid to ROW.

For more definitions, see the [Glossary: National Income and Product Accounts](#).

### Statistical conventions

**Annual-vs-quarterly rates.** Quarterly seasonally adjusted values are expressed at annual rates, unless otherwise specified. This convention is used for BEA's featured, seasonally adjusted measures to facilitate comparisons with related and historical data. For details, see the FAQ "[Why does BEA publish estimates at annual rates?](#)" Quarterly not seasonally adjusted values are expressed only at quarterly rates.

**Percent changes.** Percent changes in quarterly seasonally adjusted series are displayed at annual rates, unless otherwise specified. For details, see the FAQ "[How is average annual growth calculated?](#)" and "[Why does BEA publish percent changes in quarterly series at annual rates?](#)" Percent changes in quarterly not seasonally adjusted values are calculated from the same quarter one year ago. All published percent changes are calculated from unrounded data.

**Calendar years and quarters.** Unless noted otherwise, annual and quarterly data are presented on a calendar basis.

**Quantities and prices.** Quantities, or "real" volume measures, and prices are expressed as index numbers with a specified reference year equal to 100 (currently 2012). Quantity and price indexes are calculated using a Fisher-chained weighted formula that incorporates weights from two adjacent periods (quarters for quarterly data and annuals for annual data). For details on the calculation of quantity and price indexes, see Chapter 4: Estimating Methods in the [NIPA Handbook](#).

**Chained-dollar values** are calculated by multiplying the quantity index by the current dollar value in the reference year (2012) and then dividing by 100. Percent changes calculated from real quantity indexes and chained-dollar levels are conceptually the same; any differences are due to rounding. Chained-dollar values are not additive because the relative weights for a given period differ from those of the reference year. In tables that display chained-dollar values, a "residual" line shows the difference between the sum of detailed chained-dollar series and its corresponding aggregate.

## Updates to GDP

BEA releases three vintages of the current quarterly estimate for GDP. "Advance" estimates are released near the end of the first month following the end of the quarter and are based on source data that are incomplete or subject to further revision by the source agency. "Second" and "third" estimates are released near the end of the second and third months, respectively, and are based on more detailed and more comprehensive data as they become available.

The table below shows the average revisions to the quarterly percent changes in real GDP between different estimate vintages, without regard to sign.

Vintage	Average Revision Without Regard to Sign (percentage points, annual rates)
Advance to second	0.5
Advance to third	0.6
Second to third	0.3

Note - Based on estimates from 1993 through 2018. For more information on GDP updates, see [Revision Information](#) on the BEA Web site.

Annual and comprehensive updates are typically released in late July. Annual updates generally cover at least the 5 most recent calendar years (and their associated quarters) and incorporate newly available major annual source data as well as some changes in methods and definitions to improve the accounts. Comprehensive (or benchmark) updates are carried out at about 5-year intervals and incorporate major periodic source data, as well as major conceptual improvements.

Unlike GDP, an advance current quarterly estimate of GDI is not released because data on domestic profits and on net interest of domestic industries are not available. For fourth quarter estimates, these data are not available until the third estimate.

1. Real gross domestic income is gross domestic income deflated by the implicit price deflator for gross domestic product.

Note. Users are cautioned that particularly for components that exhibit rapid change in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series. For accurate estimates of the contributions to percent changes in real gross domestic product, use table 2.

1. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

2. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

1. Gross domestic income deflated by the implicit price deflator for gross domestic product.

2. Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

3. This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note. Estimates under the *Percent change from the preceding year* columns are calculated from annual data. Estimates under the *Percent change fourth quarter to fourth quarter* columns are calculated from fourth quarter values relative to the same quarter one year prior.

1. Personal income is also equal to national income less corporate profits with inventory valuation and capital consumption adjustments, taxes on production and imports less subsidies, contributions for government social insurance, net interest and miscellaneous payments, business current transfer payments (net), and current surplus of government enterprises, plus personal income receipts on assets, and personal current transfer receipts.

2. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

1. The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

2. Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2012 current-dollar value of the corresponding series, divided by 100.

3. Chained-dollar net value added of nonfinancial corporate business is the difference between the gross value added and the consumption of fixed capital.

4. The deflator for gross value added of nonfinancial corporate business divided by 100.

Note. Estimates in this table are based on the 2012 North American Industry Classification System (NAICS).
